Statseeker
every port. every minute. everywhere.

Executive Brief

Know your network: Complete visibility, faster diagnostics, tune it to perform.

Know what's working: Identify issues, prioritize actions, know what's on track.

Know what you need: Deploy your team, invest as you grow, focus on performance.

Statseeker is the only network performance monitoring technology to seamlessly and successfully combine **speed + scale + value**.

Statseeker's network monitoring technology is unique, expert and very specialized.

For Business Owners and Executives, Statseeker...

• Optimizes total cost of ownership (TCO) via efficiencies of headcount and capital equipment.

• One server = less CAPEX plus lower ongoing maintenance costs.

• Deploys your team and resources more efficiently, improving network uptime.

• Controls your spend - invest as demands grow and focus on performance.

• Faster diagnostics deliver less network downtime and improved customer/user satisfaction.

• Inventory is easier - know where your network assets are at all times.

• Low bandwidth utilization and better efficiencies, cost savings.

• Accessibility and simplicity of reporting, useful original data, never rolled up.

The Company

Statseeker was founded in 1996 as a privately held company of expert network monitoring software developers.

Statseeker then incorporated in 1998, and has enjoyed continuous growth and profitability based on our product strengths, our integrity and our high levels of customer service.

In 2015 Statseeker Pty Ltd announced the formation of Statseeker, Inc. headquartered in San Diego, CA. Statseeker, Inc. provides focus and support to the growing American market. Statseeker is now a global company with staff based around the globe ready to assist our customers.

Statseeker is a global provider of innovative network monitoring solutions for the IT enterprise and OT industrial market space. With active deployments in over 22 countries and many Fortune 100 firms, Statseeker monitors millions of interfaces in real-time. These companies trust Statseeker to deliver big data, make decisions and take action. Statseeker allows them to identify critical issues, isolate what needs work with confidence and fix problems instantly.

Statseeker offers licensing options for a single license fee from 1,000 interfaces to deployments scalable to 1 million interfaces per server with worldwide electronic delivery of technical support and all upgrades.

What Statseeker Users Say

California State University realized a net saving of $30M USD by reducing its planned wired network upgrade by 50%, made visible by Statseeker's network monitoring software.

"We knew there were some extra ports available, but this was mind-boggling" Michel Davidoff, Director of Cyberinfrastructure Services at California State University.

Department of Agriculture & Fisheries required a fast, highly scalable, cost-effective network management solution that provides detailed monitoring visibility from the core of their network right down to the edge.

"Statseeker Version 5.0 provides greater visibility of our network performance. The combination of increased scalability and high availability gives me the peace of mind knowing that our network monitoring is in safe hands." Su Lee, Network Administrator, Department of Agriculture & Fisheries.
